

# SAVE A LIFE? KEEP YOUR HOME'S GAS FURNACE VENTS FREE OF SNOW

Your gas furnace needs an intake vent to draw oxygen into the unit, and an exhaust vent to expel the Carbon Monoxide created to heat your home. Even a partial blockage to either one of your furnace vents can affect the performance and put your family at risk.

Keeping your heating vents and gas meter free of snow & ice is a simple and smart thing to do. It may also save your life one day.
